Subject: Dresden Nuclear Power Station Units 2 and 3 Supplemental  
Response to Performance Appraisal Inspection 50-237/83-16; 50-  
249/83-15, NRC Docket Numbers 50-237 and 50-249

Reference: C. Reed Letter to J. G. Keppler dated October 27, 1983, transmitting  
response to Performance Appraisal Inspection

The reference letter provided Commonwealth Edison's (CECo's) response to the Performance Appraisal performed on May 9 through June 3, 1983. In the response to NRC Observation 1A, CECo committed to have senior station management convene approximately quarterly, but not less than twice a year, to discuss the safety significance of trends in topics such as Deviation or Licensee Event Reports, Q.A. Audits, Radiation Occurrence Reports, Nonconformance or Discrepancy records, and NRC correspondence which had been issued within that period.

Dresden has historically satisfied the review commitment by conducting Quarterly Nuclear Safety Meetings and Corporate Windows meetings. Recently, Dresden began conducting monthly Site Overview meetings to review performance trends. With the addition of the Site Vice President to Dresden's organization, upper management review of the stated topics is now accomplished more regularly, and the quarterly meetings are no longer necessary. Furthermore, Dresden Station has also initiated an Integrated Reporting Process that is capable of identifying adverse trends. In light of Dresden Station's regular attention to significant safety issues, Dresden Station will no longer conduct the subject quarterly management meetings discussed in the reference letter.

If your staff has any questions or comments concerning this letter, please refer them to Sara Reece-Koenig, Regulatory Performance Administrator at (708) 663-7250.

Sincerely,

D. Farrar

Nuclear Regulatory Services Manager
