Gentlemen:

In accordance with 10 CFR 26.71(d), Commonwealth Edison Company is providing the compiled fitness-for-duty program performance data for each Station and the applicable Corporate support employees for the six month period ending December 31, 1993.

Attachment A through F contain the performance data for Braidwood, Byron, Dresden, LaSalle, Quad Cities, and Zion Stations respectively. Attachment G contains the performance data for the Corporate support personnel.

Please direct any questions regarding this matter to this office.

Respectfully,

T.W. Simpkin
Nuclear Licensing Administrator

On November 1, 1990, CECo implemented a 50 ng/ml positive threshold for THC. In order to report test results for the USNRC specified level (100 NG/ML) and for CECo's more stringent level of 50 ng/ml, the data is reported above as follows:

All Positive Tests at or above
Commonwealth Edison's threshold.

Positive Tests at
100 ng/ml or greater.

BRAIDWOOD NUCLEAR POWER STATION

For the year 1993, the 100% random test rate requirement was accomplished for the licensee employes, short term contractors and the long term contractors.

MANAGEMENT ACTIONS AND SANCTIONS

One positive test resulted in either the denial of unescorted access.

EVENTS REPORTED

There were no 24 hour reportable events this period.

All Positive Tests at or above Commonwealth Edison's threshold.

Positive Tests at 100 ng/ml or greater.

BYRON NUCLEAR POWER STATION

For the year 1993, the 100% random test rate requirement was accomplished for the licensee employes, short term contractors and the long term contractors.

MANAGEMENT ACTIONS AND SANCTIONS

Nineteen positive tests resulted in either the denial or revocation of unescorted access.

One refusal to pre-access test by a short term contractor resulted in the denial of unescorted access for a minimum of three years.

One 'no temperature' random test required a for cause test that resulted in revocation of unescorted access for a fitness for duty program violation.

EVENTS REPORTED

There were no 24 hour reportable events this period.

On November 1, 1990, CECo implemented a 50 ng/ml positive threshold for THC. In order to report test results for the USNRC specified level (100 NG/ML) and for CECo's more stringent level of 50 ng/ml, the data is reported above as follows:

All Positive Tests at or above
Commonwealth Edison's threshold.

Positive Tests at
100 ng/ml or greater.

LASALLE NUCLEAR POWER STATION

For the year 1993, the 100% random test rate requirement was accomplished for the licensee employees, short term contractors and long term contractors.

MANAGEMENT ACTIONS AND SANCTIONS

Each of the ten positive tests resulted in either denial or revocation of unescorted access.

One licensee employe had access denied for failure to cooperate during a random test collection.

On October 6, 1993, a short term contractor was tested for cause on the odor of alcohol. Contrary to procedure, an alcohol test was performed and the individual was returned to work without an urine test. An investigation was conducted to determine the root cause of this error. It was determined that the procedures used to direct management in the handling of For Cause testing were not updated to the most current Corporate Nuclear Security Guidelines. Several actions were taken to prevent recurrence. The procedures will be revised to incorporate the Corporate guidance. The security force post instruction was revised to provide clear action statements. Management and contractor supervisors were trained in the proper handling of a for cause event.

EVENTS REPORTED

On July 9, 1993, a random test of a contractor supervisor yielded a positive test result. Unescorted access was denied and the event was reported to the USNRC headquarters of July 9, 1993. A work investigation was conducted and concluded the individual's work history did not reveal any areas of performance that precluded safe operation of the plant. This individual has not met reinstatement requirements and therefore access remains denied.

On October 21, 1993, Corporate Fitness for Duty notified the LaSalle Station Security Administrator a contractor being in-processed for unescorted access had tested positive and was in violation of the Fitness for Duty Program. The contractor had already been granted unescorted access, was badged and was working within the protected area of the station. The contractor was located and escorted off-site. This event received a NRC violation. Refer to Inspection Report 50-373/93033; 50-374/93033.

On November 1, 1990, CECo implemented a 50 ng/ml positive threshold for THC. In order to report test results for the USNRC specified level (100 NG/ML) and for CECo's more stringent level of 50 ng/ml, the data is reported above as follows:

All Positive Tests at or above
Commonwealth Edison's threshold.

Positive Tests at
100 ng/ml or greater.

CORPORATE NUCLEAR OPERATIONS

For the 2nd Period 1993, corporate nuclear operations support employees were random tested at a rate of 50%. The 100% random test rate requirement was accomplished.

MANAGEMENT ACTIONS AND SANCTIONS

One positive test resulted in the denial of unescorted access.

Commonwealth Edison does not invoke temporary suspensions or other administrative actions for on-site presumptive positives for Marijuana and for Cocaine. However, the confirmation rate for Marijuana and Cocaine was 94.5% for the year 1993.

For the 2nd Period, Commonwealth Edison submitted 75 blind performance specimens to the SAMHSA laboratory as required. All of the tests results were as expected.

1,017 on-site tested negatives were submitted to the SAMHSA laboratory as part of the quality control requirement for on-site testing facilities. There were no false negatives this period.

One (1) appeal was filed for the 2nd period. Program violation decisions were upheld by the executive review board.

Sixty-two (62) positive test results were reported by the laboratory for illegal substances. All were verified confirmed positive by the Medical Review officer. No requests for reanalysis were received this period.

The combined positive random test rate for Commonwealth Edison owned and operated nuclear facilities for this period was .17% for licensee employees, .51% for short term contractors and 0% for long term contractors.

EVENTS REPORTED

No 24 hour Fitness for Duty reports were filed for the second period.
