Mr. William T. Russell, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attn: Document Control Desk

Subject: Dresden Nuclear Power Station Units 2 and 3
Quad Cities Nuclear Power Station Units 1 & 2
Response to NRC Request for Information on Shroud/Recirculation Pipe Break
NRC Docket Nos. 50-237/249 and 50-254/265

Reference: (a) ComEd letter (P. Piet) to NRC (W. Russell), "Response to NRC
Request for Information on Recirculation Pipe Break", dated July 12,
1994.

Dear Mr. Russell:

Reference (a) responded to NRC staff requests for information on the impact of
Recirculation Pipe Break on the Shroud. In Reference (a) ComEd indicated that a final report
on the TRAC-G 3D model results would be available August 19, 1994. This letter is to
inform you that the results from that analysis are not complete and are currently scheduled to
be available by September 2, 1994.

The calculations are proceeding but the development of the model, development of
more extensive sensitivity runs, and the development of more extensive validation all
contributed to this delay. We apologize for any inconvenience this may have caused your
Staff.

To the best of my knowledge and belief, the statements contained in this response are
true and correct. In some respects, these statements are not based on my personal knowledge,
but obtained information furnished by other Commonwealth Edison employees, contractor
employees, and consultants. Such information has been reviewed in accordance with
company practice, and I believe it to be reliable.
