

August 22, 1994

Commissioner Ivan Selin
Chairman
Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Commissioner Selin:

As a resident of northern Illinois, I want to register my concern about Commonwealth Edison's (CECO) plans to reduce security at its LaSalle, Dresden, and Zion nuclear plants.

At the time CECO pushed hard to construct more nuclear reactors in northern Illinois than anywhere else in the country, they made a commitment to the Nuclear Regulatory Commission (NRC), and more importantly, to us that they would maintain the highest level of safety and security possible to protect us.

When we agreed to allow CECO to build all of these plants in our backyards, we put our faith in you. We trusted the NRC to aggressively watch over CECO to make sure that their commitments would be fulfilled, including the one to keep the plants secure. I am concerned that you are prepared to let them do less than they have been doing.

They have already reduced the number of security officers by 40 percent. Now that all their reactors are finished, CECO is telling us they want to save money by taking highly trained armed security officers and making them unarmed guards so they can pay them less money. This, at a time when terrorist threats have hit closer to home than at any time in our recent history.

They have said publicly that they should be allowed to reduce security at their plants because you have let other plants such as Three Mile Island get away with it.

We don't want another Three Mile Island type of plant here in Illinois.

Please help us stop this plan by CECO. Only you have the power to make them live up to their commitments. **(Do not let them reduce armed security in Northern Illinois.)** Make them put people over profits this time.

I look forward to your response to my plea for assistance.

Sincerely,

Linn Wilson

Braidwood shuts down — again

By Mike Lyons
Journal writer

The roar of thousands of cubic feet of steam escaping from Common-Wealth Edison's Braidwood nuclear power plant this morning frightened plant neighbors and produced a flood of calls to Edison offices as company

spokesmen in Chicago scrambled to find answers.

Edison spokesman Dan Demos said the steam release was an automatic shutdown of unit one, which was operating under full load at the time.

Unit two shut down under similar circumstances Aug. 2.

Demos said the steam represents no threat to the public, though some plant neighbors aren't so sure.

Rose Favaro who has lived across Illinois 129 from the plant since it was built in 1975, fears that "some-day this plant's going to blow, and yet Edison keeps telling us it's all right.

"All of a sudden there was the big, loud blast of steam. I think my blood pressure shot up 50 points."

Mrs. Favaro, 67, said the roar of escaping steam was audible despite her having all doors and windows closed.

The shutdown began at 10:29 and was still producing venting steam at 11:45 a.m.

Demos thought the event might last only an hour.

He characterized an hour-long venting episode as "not unduly long if the unit is under full load" as was the case this morning.

At late morning, Edison was still searching for the factors which caused the unit's "four main steam isolation valves to close."

The jetting steam was absorbed by the foggy shroud which clung to much of the area this morning.

Demos said such emergency steam venting is common to all plants which generate steam regardless of the kind of fuel the plant uses, noting a recent steam release at Edison's coal-fired facility near Joliet.

But the "steam event," as Edison terms such occurrences, still unnerves neighbors like Mrs. Favaro whose personal campaign for answers to public fears have led her to phone the Nuclear Regulatory Commission in Washington D.C. following past "steam events."

"All of this is being released into the air," said Mrs. Favaro, adding, "they keep saying there's no danger to the public, but there's a box up on a pole they check once per month for radiation."

Demos acknowledges that such checks take place as a matter of standard practice by the power firm.

"We have our own system as does the Illinois Department of Nuclear Safety, around all of our stations to do a real-time monitor of any kind of ambient conditions."

But Demos says only steam, not radiation, escaped Braidwood this day.

Dear Commissioner Selin:

As a resident of northern Illinois, I want to register my concern about Commonwealth Edison's (CECO) plans to reduce security at its LaSalle, Dresden, and Zion nuclear plants.

At the time CECO pushed hard to construct more nuclear reactors in northern Illinois than anywhere else in the country, they made a commitment to the Nuclear Regulatory Commission (NRC), and more importantly, to us that they would maintain the highest level of safety and security possible to protect us.

When we agreed to allow CECO to build all of these plants in our backyards, we put our faith in you. We trusted the NRC to aggressively watch over CECO to make sure that their commitments would be fulfilled, including the one to keep the plants secure. I am concerned that you are prepared to let them do less than they have been doing.

They have already reduced the number of security officers by 40 percent. Now that all their reactors are finished, CECO is telling us they want to save money by taking highly trained armed security officers and making them unarmed guards so they can pay them less money. This, at a time when terrorist threats have hit closer to home than at any time in our recent history.

They have said publicly that they should be allowed to reduce security at their plants because you have let other plants such as Three Mile Island get away with it.

We don't want another Three Mile Island type of plant here in Illinois. - *Do we?*

Please help us stop this plan by CECO. Only you have the power to make them live up to their commitments. **(Do not let them reduce armed security in Northern Illinois.)** Make them put people over profits this time.

I look forward to your response to my plea for assistance.

Sincerely,

Doris Cannon #3

EMERGENCY SHUTDOWN AT NUCLEAR PLANT

Continued from page 1

Public Citizen Critical Mass Energy Project, says the reactor shouldn't be operated with this crack.

Bill Magaverin, director of Critical Mass, said Dresden is the fourth worst plant in the nation, based on a Critical Mass analysis of NRC data.

Last month, an NRC engineer said that an NRC decision to change the way steam tubes are inspected at nuclear plants made a reactor core meltdown 500 times more likely.

The engineer specifically mentioned Braidwood where 18,000 steam tubes were checked and 500 corroded or cracked tubes were plugged. The NRC agreed to allow the Braidwood reactors to be operated, despite the plugged tubes.

Magaverin said "Braidwood has very serious leaks in its steam generator tubes."

When asked if the four automatic shutdowns at Dresden and Braidwood were unusual or cause for increased concern, Strasma said no. He said reactors automatically shut down about twice per year.

For instance, the two reactors at Braidwood have shut down nine times in the last three years.

The Dresden reactors have shut down at least six times in the same period.

The Dresden plant is on the NRC's national watch list of problem

According to the NRC.

However, Magaverin of Washington, D.C.-based Critical Mass, said Commonwealth Edison nuclear plants have many problems, and the NRC is not doing its job of regulating. "Instead of being a watchdog of the nuclear industry, it is a lapdog of the nuclear industry," he said.

Meanwhile, the FBI has been called in to investigate a radiation exposure incident at Commonwealth Edison's Quad Cities Nuclear Power Station, the utility said.

The FBI is trying to determine how a radioactive calibration tool was placed in a worker's street clothes Monday. Kathy Long received more radiation in 12 minutes than federal guidelines allow in a year for nuclear plant workers, federal regulators have said.

Journal/Dennis R.

Plumes of steam surround a reactor structure at the Braidwood nuclear power plant following an automatic shutdown Thursday. The steam posed no hazard, according to a Commonwealth Edison spokesman.

Monitors shut reactors here

Journal staff and wire reports

All four reactors at the Dresden and Braidwood nuclear power plants were shut down automatically in the last 10 days, but the Nuclear Regulatory Commission is not raising the alarm. Yet.

People who live near the Braidwood plant were frightened Thursday when an automatic shutdown of the Unit 1 reactor sent huge plumes of steam spewing over the countryside.

Jan Strasma, NRC spokesman, said that the cause of the shutdown was being initially blamed on a "circuit card" — a computer glitch that cut off the turbines from the steam generators.

This bottled up steam in the generators, under pressure of 1,200 pounds

per square inch.

Automatic shutdown procedures were initiated, forcing open both mechanical and electrically operated safety valves, he said.

The shutdown occurred about 10:30 a.m. and steam continued to shoot out all afternoon until about 4:15 p.m., according to Gary Wald, Commonwealth Edison spokesman. By that time, the steam pressure was down to 300 psi.

Strasma said this was a very unusual type of shutdown. In most automatic shutdowns, the valves to the turbines remain open, allowing some of the steam to be leaked off through the turbines. Only part of the steam has to be vented outside.

In this case, however, 100 percent of the steam had to be vented. The

steam is clean and non-radioactive, according to Edison and the NRC.

Strasma said the initial venting sounds like a "freight train." Also, in this case, the force of the steam released dislodged a piece of sheet metal at the top of the reactor building. The sheet metal landed on the adjacent turbine building, causing minor damage.

Unit 1 could be off for as long as three days as plant workers search for the cause of the shutdown and make any needed repairs.

Edison officials said no plant workers were injured by the venting steam, and it posed no hazard to the public. The shutdown had no effect on electric production, Wald said.

The Unit 2 reactor shut down under full power Aug. 2 because of the

failure of a valve that feeds one of the steam generators restarted the next day and is at full power now.

Both the Dresden plant's reactors, north of Coal City, are also too.

One shut down Saturday being restarted after refueling other shutdown Monday. Unit 1 still down.

Both the Dresden and Braidwood plants have been the subject of criticism from inside and outside the NRC in recent months.

One of the Dresden reactors has a crack around the huge, outer core shroud. Both Edison and NRC say it is safe to operate the reactor with the crack. However,

Kankakee, Ill.

Braidwood shuts down — again

By Mike Lyons
Journal writer

The roar of thousands of cubic feet of steam escaping from Commonwealth Edison's Braidwood nuclear power plant this morning frightened plant neighbors and produced a flood of calls to Edison offices as company

spokesmen in Chicago scrambled to find answers.

Edison spokesman Dan Demos said the steam release was an automatic shutdown of unit one, which was operating under full load at the time.

Unit two shut down under similar circumstances Aug. 2.

Demos said the steam represents no threat to the public, though some plant neighbors aren't so sure.

Rose Favaro who has lived across Illinois 129 from the plant since it was built in 1975, fears that "some-day this plant's going to blow, and yet Edison keeps telling us it's all right.

"All of a sudden there was the big, loud blast of steam. I think my blood pressure shot up 50 points."

Mrs. Favaro, 67, said the roar of escaping steam was audible despite her having all doors and windows closed.

The shutdown began at 10:29 and was still producing venting steam at 11:45 a.m.

Demos thought the event might last only an hour.

He characterized an hour-long venting episode as "not unduly long if the unit is under full load" as was the case this morning.

At late morning, Edison was still searching for the factors which caused the unit's "four main steam isolation valves to close."

The jetting steam was absorbed by the foggy shroud which clung to much of the area this morning.

Demos said such emergency steam venting is common to all plants which generate steam regardless of the kind of fuel the plant uses, noting a recent steam release at Edison's coal-fired facility near Joliet.

But the "steam event," as Edison terms such occurrences, still unnerves neighbors like Mrs. Favaro whose personal campaign for answers to public fears have led her to phone the Nuclear Regulatory Commission in Washington D.C. following past "steam events."

"All of this is being released into the air," said Mrs. Favaro, adding, "they keep saying there's no danger to the public, but there's a box up on a pole they check once per month for radiation."

Demos acknowledges that such checks take place as a matter of standard practice by the power firm.

"We have our own system as does the Illinois Department of Nuclear Safety, around all of our stations to do a real-time monitor of any kind of ambient conditions."

But Demos says only steam, not radiation, escaped Braidwood this day.

Commissioner Ivan Selin
Chairman
Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Commissioner Selin:

As a resident of northern Illinois, I want to register my concern about Commonwealth Edison's (CECO) plans to reduce security at its LaSalle, Dresden, and Zion nuclear plants.

At the time CECO pushed hard to construct more nuclear reactors in northern Illinois than anywhere else in the country, they made a commitment to the Nuclear Regulatory Commission (NRC), and more importantly, to us that they would maintain the highest level of safety and security possible to protect us.

When we agreed to allow CECO to build all of these plants in our backyards, we put our faith in you. We trusted the NRC to aggressively watch over CECO to make sure that their commitments would be fulfilled, including the one to keep the plants secure. I am concerned that you are prepared to let them do less than they have been doing.

They have already reduced the number of security officers by 40 percent. Now that all their reactors are finished, CECO is telling us they want to save money by taking highly trained armed security officers and making them unarmed guards so they can pay them less money. This, at a time when terrorist threats have hit closer to home than at any time in our recent history.

They have said publicly that they should be allowed to reduce security at their plants because you have let other plants such as Three Mile Island get away with it.

We don't want another Three Mile Island type of plant here in Illinois.

Please help us stop this plan by CECO. Only you have the power to make them live up to their commitments. **(Do not let them reduce armed security in Northern Illinois.)** Make them put people over profits this time.

I look forward to your response to my plea for assistance.

Sincerely,

William H. Moore
