Subject: RE: Topical Report (TR-0516-49417-P) - Request for Additional Information Letter No. 8872 (eRAI No. 8872)
Attachments: Request for Additional Information No. 8872 (eRAI No. 8872).pdf

Attached please find NRC staff's request for additional information concerning review of the NuScale Topical Report.

Please submit your response within 60 days of the date of this RAI to the NRC Document Control Desk.

If you have any questions, please contact me.

Thank you.

Application Title: NuScale Topical Report

Operating Company: NuScale

Docket No. PROJ0769

Review Section: 01 - Introduction and Interfaces

Application Section: 1

QUESTIONS

01-16

In accordance with 10 CFR 50 Appendix A GDC 10, "Reactor design," the reactor core and associated coolant, control, and protection systems shall be designed with appropriate margin to assure that specified acceptable fuel design limits are not exceeded during any condition of normal operation, including the effects of anticipated operational occurrences. The SRP 15.0.2 acceptance criteria with respect to evaluation models includes the requirement that the chosen mathematical models and the numerical solution of those models must be able to predict the important physical phenomena reasonably well from both qualitative and quantitative points of view.

Section 5.6.4.1, "Pellet Heat Transfer," of the topical report, TR-0516-49417-P, describes the pellet heat transfer model and refers to the direct energy deposition factor. It is not clear what value of the direct energy deposition factor is used, how it is determined, or if it is a fuel-design-specific value.

In order to make an affirmative finding associated with the above regulatory requirement important to safety, NRC staff requests NuScale to describe the method for determining the direct energy deposition factor for licensing calculations.
