## General Comment

I have mixed views on this. I feel it would be safer for patient and families or others who'd be around the patient if after RAI the patient stayed in the hospital or outpatient setting. On the other hand this is more costly, may create hardship circumstances for patients home life. For me I felt it would've been safer not being at home due to being around my children and pets, etc. Overall I wanted to be at home, comfortable in a familiar environment. But yes, I'd say being in a controlled medical environment is safer for everyone.
