## General Comment

Docket ID NRC-2017-0094

In regards to what should be done with a patient after RAI treatment. I personally feel that they need to stay in the hospital so that they don't have to worry about anything at home. I had to go through it, thankfully my insurance covered for me to stay in the hospital as I had a new born baby at home and had no where else to go. But I was only allowed 2 days in there, I wish I could have been able to stay there for at least 4-5 days to make sure the radiation was out of my system as when i did come home after two days I had to have limited contact with my daughter since she was only 5 months old. Talk about hard for a first time mom and having to do that. It would have been easier to stay in the hospital those extra days to be extra sure.
