Name: Mike Lim

## General Comment

having personally gone through RAI treatment with 150mci, I believe people treated with RAI, should be hospitalized until radiation exposure levels subside to safe levels.

Additionally, I had a high level of anxiety, due to the post care instructions about eating sour candy, to keep saliva going. how much is enough? am I doing enough?

Additionally, with small children at home, home was not an option for me, and asking friends and family to stay with them was extremely awkward. everyone I talked to declined my ask, so i ended up in a hotel, asking the staff to not clean my room, and bedding my own bedding and disposable everything. and also cleaning the room on my own before i left. I also asked for a room at the end of the hallway and ensured the position of the bed was as far away as possible to the adjacent room.

Additionally, I purchased my own geiger counter, to measure my own radioactivity levels, and only returned home, when a safe reading was measured.

please change the regulations so that RAI patients are at the hospital until safe levels are reached.
