General Comment

The NRC should require an activity-based release threshold. The patient should have the option to stay in a clinic-sponsored facility

The time frame should be clarified.

The dose criteria for members of the general public especially young children might be reduced.

A requirement for a patient being released with a chance to expose young children should be included.

A discussion about isolation should be required in sufficient time before treatment so that there is time to make any necessary arrangements including if the patient is to be held.

The NRC should include any time for providing instructions.
