## General Comment

My wife was treated in 2006 in New Jersey. We were told about the dangers, and just sent home. We were told to get rid of everything she touched. But yet they continue to just let her out of the hospital. If it really is that dangerous, why do they release the patients? If it's not that dangerous, then don't scare the bejesus out of everybody. The family member nobody followed up to make sure she had followed the protocols. No one tested any family members to make sure they hadn't been irradiated. And we are supposed to have cutting-edge medicine. Bottom line, they need to hospitalize these patients.
