Wipe Performed By DON GRASHAW Date 2/2/2017

The United States Nuclear Regulatory Commission requires that radiographic sources be tested for evidence of leaking at the time of manufacture and thereafter at not more than six month intervals. Each exposure device using Depleted Uranium (DU) shielding must be tested for DU contamination at intervals not to exceed twelve months. The amount of removable contamination must not exceed 0.005 microcuries. If the test shows more than 0.005 microcuries of removable contamination, the source and equipment must be immediately taken out of service and be repaired or disposed of.
