Subject: Dresden Station Units 2 and 3
Proposed Amendment to Appendix A,
Technical Specifications, to DPR-19
and DPR-25 Implementing Fire Protection
Modifications
NRC Docket Nos. 50-237/249

Reference (a): G. Lear letter to C. Reed dated March 22, 1978

Dear Sir:

Pursuant to 10 CFR 50.59, Commonwealth Edison proposes to amend Appendix A, Technical Specifications, to Facility Operating Licenses DPR-19 and DPR-25 for Dresden Units 2 and 3, respectively. These amendments are being submitted to incorporate Technical Specification requirements which are required to implement the Fire Protection Modifications.

The proposed changes are enclosed in Attachments 1 and 2 for Dresden Units 2 and 3, respectively. These proposed changes have received Onsite and Offsite review and approval.

Since these changes reflect modifications to the plant which will improve the margin of safety relative to potential fires, and these modifications have received NRC Staff approval as indicated in Reference (a), they do not constitute an unreviewed safety concern.

Pursuant to 10 CFR 170, Commonwealth Edison Co. has reviewed the proposed changes and determined them to be one (1) Class III and one (1) Class I Amendment. As such, a fee remittance in the amount of \$4,400.00 is enclosed.

Please address any questions concerning this matter to this office.
