Mr. Owen Rothberg
Structural Engineering Branch
USNRC
7920 Norfolk Avenue
Bethesda, MD 20014

Dear Mr. Rothberg:

Per advice of Mr. Laird Woldridge of CECO, I am sending the enclosed magnetic tape (P24304) containing four (4) Dresden (2 and 3) earthquake acceleration time-histories at pool floor elevation 570.0 ft. This tape was generated through CDC scope system with the following parameters: 9 track, 800 BPI, L=QUADREX and contains the following four files:

1. N-S direction Accl. T/H based on El Centro quake,
2. E-W direction Accl. T/H based on El Centro quake,
3. N-S direction Accl. T/H based on USNRC Reg. Guide 1.60,
4. E-W direction Accl. T/H based on USNRC Reg. Guide 1.60.

All accelerations are in g units. Each of the first two files (files 1 and 2) contains 1 header card followed by 257 cards, each of which contains 4 time-amplitude points in format 4(F6.3, F12.7) with $\Delta t = 0.01$ sec. Each of the last two files (files 3 and 4) contains 2 header cards followed by 1200 cards, each of which contains 4 time-amplitude points in format 4(2F10.6) with a $\Delta T = 0.005$ sec.

If you have any question, please contact Mr. C. C. Tang of our office or me.

Sincerely yours,

Q. A. Hossain
Manager,
Structural & Seismic Engineering
