Subject: Dresden Station Unit 3
 Quad Cities Station Units 1 and 2
 Equipment Qualification Temperature
 Profiles Inside Containment
NRC Docket Nos. 50-249/254/265

- References (a): D. B. Vassallo letter to L. O.
 DelGeorge dated February 24, 1982.
- (b): T. J. Rausch letter to D. B.
 Vassallo dated April 16, 1982.

Dear Mr. Vassallo:

In Reference (b), Commonwealth Edison indicated that a plant-specific Main Steam Line Break (MSLB) analysis was being performed for Dresden 3 and Quad Cities 1 and 2 in order to determine appropriate equipment qualification temperature profiles. This is to inform you that the analysis is now scheduled to be submitted to the NRC in September, 1982, not July, 1982 as indicated in Reference (b).

The first draft of this analysis was available in June, 1982, however, satisfactory resolution of our comments on this draft has taken longer than anticipated.

Please address any questions you may have concerning this matter to this office.

One (1) signed original and fifty-nine (59) copies of this transmittal are provided for your use.

Very truly yours,

Thomas J. Rausch
