Re: License No. 21-00021-29 Request for Amendment

I request to amend NRC License No. 21-00021-29 as follows:

Please add the following to part 10 of the License:

D. Licensed material may be received and used at the licensee's facilities located at Michigan State University, Grand Rapids Research Center at 400 Monroe Ave NW, Grand Rapids, MI 49503.

Michigan State University has constructed and opened a new research facility in Grand Rapids, Michigan that is approximately 70 miles from Michigan State University's main campus.

The new facility will feature different types of research laboratories, including research that utilizes radioactive byproduct. The type of research and quantities of radioactive byproduct to be used at the new Grand Rapids facility is consistent with research and quantities currently used Michigan State University's main campus.

Training, waste, inspections, calibrations, dosimetry and other functions for the new facility will be carried out by periodic visits from main campus Radiation Safety staff and supported by an onsite cross-trained Office of Environmental Health and Safety staff member.

The facility is expected to open within the next few months, but a specific date has not been set.

Please contact Bryan Harris, Radiation Safety Officer, at 517-884-3309 for additional information.

Signed,

**Vice President

Subject: [External_Sender] License # 21-00021-29 - New License Amendment

Hello Sara,

I hope you are well. Please see the attached request for license amendment.

MSU has constructed a new research facility in Grand Rapids, MI where some bench top research with radioactive byproduct will occur. Since the facility is about 70 miles from campus we should need an amendment to part 10 of the license to add the off campus location.

Also, have you had a chance to work on the corrections to the license from the last amendments?

Have a nice day.

Best Regards,

Bryan Harris, BS, MBA
