Subject: RE: Multi Time Machine License Renewal - License # 04-23946-01E

Ms. Treminio,

We reviewed your response to our letter dated May 23, 2017. We will issue your renewed license when we have received a copy of your California license.

Regards,

Shirley Xu

Subject: [External_Sender] Multi Time Machine License Renewal - License # 04-23946-01E

Ms. Shirley,

In response to your letter attached for additional information please see below our response:

1. License Issued by the State of California: Please note we have yet to receive our Renewal State of California issued License. After speaking with a representative, they advise me that they are still working on the process of reviewing applications. As soon as they complete the process and approve our Renewal Application, they will send us our new State of California License and we will forward a copy to you. Please see attached State of California Notice of Receipt of Renewal Application for Review. That notice demonstrates proof of an active license.
2. Method of Containment or Binding: GTLS tubes are attached to the DIAL by putting them into special premade slots with an adhesive that holds the GTLS tubes in place from below to the dial. GTLS tubes are attached to the HANDS with a non hardening adhesive from below using 3M tape (See Page 2 in our Applicant/Manufacturer Information). Also attached for your reference.
3. Labeling or Marking: Please see revised Page 3. During our revision of our Applicant/Manufacturer Information, we overlooked at our page references. But now they have been corrected to reference the correct page. See Page 17 of the proposed method of labeling each unit with the logo MTM printed on the dial.

4. Radiation Level and Method of Measurement: Please see Page 2 attached for the radiation/activity level, the total radiation level for each watch is 0.611 GBq. As for the method of measurement, it is a process done by the manufacturer “MB Microtech.” Once the GTLS tubes are manufactured, they are passed on to us (MTM) with a record number of each lot. We have to rely on “MB Microtech” for the measurement as they are approved by the USNRC.

If you have any further questions or need additional information, please contact me at the number below or by replying to this email.

Thank you,

Ramón Treminio
