Docket Nos: 50-424
and 50-425

MEMORANDUM FOR: R. Walker, Director
Division of Reactor Projects, Region II

FROM: Hugh L. Thompson, Jr., Director
Division of Licensing, NRR

SUBJECT: VOGTLE READINESS REVIEW PROGRAM

Early in the readiness review program process, NRR requested that the Georgia Power Company provide an FSAR section cross-reference for each module in order for NRR to be able to project needed resources for upcoming module reviews. Such a cross-reference was provided in mid-April. However, it was subdivided to only one FSAR subsection (i.e. FSAR Section 1.1) which is not enough to identify each applicable review group. At a meeting on April 24, 1985, Region II and NRR requested Georgia Power to provide a cross-reference to one additional FSAR subsection. Georgia Power Company agreed to provide this information. As of the date of this memo, we have not received this information. Since this request has been outstanding for such a long time and Georgia Power Company has been unresponsive, we suggest that a formal request for this information be transmitted to the applicant directing that the cross-reference be provided without further delay.

Additionally, on Module 1, "Concrete, Cadwelds and Rebar," the applicant was equally unresponsive in responding to NRR questions developed in the initial review of the module. The applicant took four weeks from the initial telecon to respond to the remaining 3 questions. The applicant should be informed that such delinquency of response will cause at least a similar slippage in the staff's review schedule.

The applicant's response to the last 3 NRR questions was telecopied to Region II with no transmittal letter. In order to maintain appropriate documentation, the applicant should be directed to provide all information and responses by formal letter.
