July 1, 1986

Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555

Subject: Dresden Station Unit 3  
Revised Implementation Schedule  
for Reg. Guide 1.97 Modifications  
NRC Docket No. 50-249

Reference: Letter from J. R. Wojnarowski to H. R. Denton  
dated January 31, 1986.

Dear Mr. Denton:

The referenced letter provided our implementation schedule for Reg. Guide 1.97 modifications for Dresden Units 2 and 3 and Quad Cities Units 1 and 2. This transmittal provides revised completion dates for two Dresden Unit 3 modifications identified in the schedule.

Items A1 and A2 of the attachment to the referenced letter represent planned modifications to the reactor water level and pressure instrumentation to conform with Reg. Guide 1.97 guidelines. For Dresden Unit 3, these modifications were originally scheduled for the current refueling outage. However, due to NRC concerns with the related Analog Trip System modification identified during the Dresden Unit 3 Outage Modification inspections, we have deferred implementation of the Reg. Guide 1.97 portion of this modification. Therefore, items A1 and A2 for Dresden Unit 3 have been rescheduled to the next refuel outage, currently planned for September, 1987. This revised schedule will allow prior resolution of NRC concerns with our Analog Trip System design.

One signed original and ten (10) copies of this letter are provided for your use.

If you have any further questions regarding this transmittal, please contact this office.

Very truly yours,

J. R. Wojnarowski  
Nuclear Licensing Administrator
