Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: Dresden Station Unit 2
Supplemental License Amendment
for Cycle 11 Reload
NRC Docket No. 50-237

Reference: Letter from C. M. Allen to H. R. Denton
dated December 10, 1986

Dear Mr. Denton:

The referenced letter proposed changes to the Dresden Unit 2 License and Technical Specifications to support Cycle 11 operation. This submittal provides additional changes which supplement those submitted with the reference. The additional changes add a new Maximum Average Planar Linear Heat Generation Rate Curve for a reconstituted fuel bundle and incorporate labeling changes requested by NRC Staff. The supplemental changes are provided in Attachment 1 and discussed further in Attachments 2 and 3.

The proposed changes have been On-Site and Off-Site reviewed and approved. We have reviewed the supplemental License and Technical Specification amendments and determined that no significant hazards consideration exists. Our review is documented in Attachment 4. Commonwealth Edison Company is notifying the State of Illinois of this request and our no significant hazards determination by transmittal of a copy of this letter and its attachments to the designated State Official.
