SUBJECT: INSPECTION AND REPAIR - REACTOR COOLANT SYSTEM PIPING

Re: Dresden Nuclear Power Station, Unit No. 2

By letter dated December 3, 1986, the NRC concluded that the inspection plan regarding the inspection and repair performed during the fall 1986 refueling outage proposed by Commonwealth Edison Company (CECO) in its letter of August 27, 1986, as modified, was in accordance with Generic Letter 84-11.

By letter dated March 2, 1987, CECO submitted its final report of the Dresden Unit 2 augmented piping inspection according to Generic Letter 84-11. We have made a preliminary review of that report. The information provided demonstrates that CECO has complied with the NRC accepted inspection plan. Our detailed Safety Evaluation which provides the basis for our conclusion that improvements, replacements, inspection, repairs and analyses related to this IGSCC mitigation action are acceptable will be supplied after we have completed our review.

Sincerely,

Original signed by

Rajender Auluck, Acting Director  
BWR Project Directorate #1  
Division of BWR Licensing
