Mr. Harold Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Denton:

Re: Turkey Point & St. Lucie Plants
Docket Nos. 50-250, 50-251, & 50-335
Safety & Relief Valve Testing Program

By letter dated December 17, 1979, Mr. William J. Cahill, Jr., Chairman of the EPRI Safety and Analysis Task Force, submitted information entitled "Program Plan for the Performance Verification of PWR Safety/Relief Valves and Systems," December 13, 1979.

Florida Power & Light Company (FPL) considers the program to be responsive to the requirements presented in NUREG-0578, "TMI-2 Lessons Learned Task Force Status Report and Short-Term Recommendations," dated July, 1979. The program specifically addresses Item 2.1.2, which recommended in part, "...commit to provide performance verification by full scale prototypical testing for all relief and safety valves. Test conditions shall include two-phase slug flow and subcooled liquid flow calculated to occur for design basis transients and accidents."

The EPRI Program Plan provides for a completion of the essential portions of the test program by July, 1981. FPL will be participating in the EPRI program to provide program review and to supply plant specific data as required.

Very truly yours,

Robert E. Uhrig
Vice President
Advanced Systems & Technology
