PROGRAM SCOPE

This was an escalated enforcement follow-up inspection to review the licensee's implementation of corrective actions for security-related violations identified in NRC Inspection Report 03029318/2016001(DNMS). The licensee was authorized to possess and used a variety of fixed nuclear gauges for thickness measurements at its facility in Portage, Indiana.

The inspector toured the licensee's facility to verify that the licensee had fully implemented the corrective actions described in the Security Addendum to NRC IR 03029318/2016001(DNMS). The inspector also verified that the previously identified violations had not recurred since the implementation of the corrective actions. As such, the previous security-related violations were closed.

No violations of NRC requirements were identified during this inspection and previous security-related violations were closed.
