Mr. Ronald A. Jones, Vice President
South Carolina Electric & Gas Company
New Nuclear Deployment
P.O. Box 88
Jenkinsville, SC 29065

SUBJECT: NRC ACCEPTANCE REVIEW OF SOUTH CAROLINA ELECTRIC & GAS
COMPANY'S REQUEST FOR LICENSE AMENDMENT FOR THE
V. C. SUMMER NUCLEAR STATION, UNITS 2 AND 3: COMBINED
OPERATIONAL SUPPORT CENTER (CAC NO. RG3046)

Dear Mr. Jones:

By letter dated June 28, 2016, (Agencywide Documents Access and Management System (ADAMS) Accession No. ML17180A116), the South Carolina Electric and Gas Company (SCE&G/licensee), on behalf of itself and the South Carolina Public Service Authority (Santee Cooper) submitted a license amendment and exemption request (LAR 17-06) for the Combined License (COL) Numbers NPF-93 and NPF-94, for the V. C. Summer Nuclear Station Units 2 and 3, respectively. The proposed amendment would revise the licensing basis information to reflect combining the Units 2 & 3 individual operational support centers (OSCs) into a common OSC serving both units, and standardizing the titles of the combined OSC and the offsite notification system.

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of the LAR, as revised and supplemented. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review was also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with Title 10 of the *Code of Federal Regulations* (10 CFR) Section 50.90, an amendment to the license must fully describe the changes requested, and follow as far as applicable, the form prescribed for original applications. Section 52.79 of the 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed SCE&G's application against the regulatory requirements and has concluded that it provides sufficient technical detail to enable the NRC staff to complete its detailed review and make an independent assessment regarding the acceptability of the proposed changes in terms of regulatory requirements and the protection of public health and safety and the environment.

Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. SCE&G will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

SCE&G requested an issuance date of May 31, 2018. We will attempt to support that date but it will depend on whether supplements or revisions to the request are required.

If you have any questions, please contact me at (301) 415-5848 or bill.gleaves@nrc.gov.

Sincerely,

William (Billy) Gleaves, Senior Project Manager
