Gentlemen:

Enclosed is IE Supplement No. 3 to Bulletin 79-01B. This supplement clarifies two issues raised by Supplement No. 2. These are (1) the submittal of qualification information for equipment resulting from TMI Action Plan requirements and (2) the qualification of equipment which is required to achieve a cold shutdown condition. This action is a result of industry feedback to NRC regarding interpretation of Supplement No. 2. The information presented is applicable to your submittal regarding environmental qualification of Class 1E equipment which is required by November 1, 1980.

Should you have questions regarding this Supplement, please contact this office.

Sincerely,

  
James P. O'Reilly  
Director
