1. The purpose of this document is to provide a comprehensive overview of the current status of the project. It is intended for the use of management and other stakeholders who are involved in the project's execution. The information presented here is based on the most recent data available and is subject to change as the project progresses.

2. The project has been initiated in accordance with the approved business plan and is currently in the early stages of implementation. The primary objective is to ensure that all project activities are completed on time and within budget.

3. The project team has identified several key risks that could impact the project's success. These risks include resource constraints, potential delays in the procurement process, and the possibility of changes in project requirements. The team is actively monitoring these risks and has developed mitigation strategies to minimize their impact.

4. The project is currently on track and is expected to be completed by the end of the fiscal year. The team is committed to maintaining open communication with all stakeholders and providing regular updates on the project's progress.

Office of Nuclear Reactor Regulation
Attention: Robert A. Clark, Chief
Operating Reactors Branch #3
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Clark:

Re: St. Lucie Unit 1
Docket No. 50-335
Post-TMI Requirements
RCS Vent System Procedures

The purpose of this letter is to transmit to you a copy of our "draft" Reactor Coolant Gas Vent System Off-Normal operating procedure. The procedure has been reviewed by the St. Lucie Facility Review Group but has not been approved for use. However, it was found to be acceptable for transmittal as an approved draft of the procedure. We trust that the enclosed procedure will facilitate the NRC staff's review and approval of our Reactor Coolant Gas Vent System.

Very truly yours,

Robert E. Uhrig
Vice President
Advanced System and Technology
