Office of Nuclear Reactor Regulations
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Eisenhut:

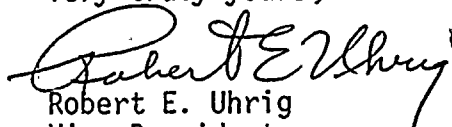

Re: St. Lucie Unit No. 2
Docket No. 50-389
RPS Power Supply Test Report

Section 7.2.5 of the St. Lucie Unit 2 Safety Evaluation Report, Supplement 1, dated December 1981, describes the reactor protection system matrix power supply test program and identifies confirmatory items that the NRC required for the surge and fault testing. Specifically, your staff requested that:

- 1) The testing, as described in subsection 7.2.5 of the first supplement of the safety evaluation report, has been completed.
- 2) The acceptance criteria described in subsection 7.2.5 of the first supplement of the safety evaluation report has been met.
- 3) Confirmation be provided that the ultra-isolation transformers will be installed.

Florida Power and Light Company, via the attached report, confirms that the testing has been completed in accordance with the program previously submitted and reviewed by the NRC, and that the acceptance criteria stated in the SSER 1, subsection 7.2.5, which the NRC previously reviewed and approved, has been met. FPL also reconfirms that the ultra-isolation transformers will be installed prior to core load.

Very truly yours,

Robert E. Uhrig
Vice President
Advanced Systems and Technology
