

FEB 15 1983

Docket No. 50-389

APPLICANT: Florida Power and Light Company (FP&L)
FACILITY: St. Lucie Plant, Unit 2
SUBJECT: SUMMARY OF MEETING HELD IN BETHESDA, MARYLAND WITH FP&L
ON JANUARY 27, 1983 ON THE FIRE PROTECTION PROGRAM.

FP&L's implementation schedule for installation of the fire protection hardware items indicated that nearly all the items will be completed by 5% power. This includes detectors, dampers, barriers, fire seals, cable rerouting and sprinklers (which will be installed to NFPA 13 Code).

After core load up to 5% power, FP&L agreed to provide fire watches and patrols which will meet the requirements of the Technical Specifications for inoperative fire protection components/systems.

FP&L will identify the QA/QC procedures that will apply to the fire protection hardware installation.

FP&L will formally submit by 2/9/83 their implementation schedule along with justification for operating the plant beyond 5% power for a few of the items that may not be completed by 5% power. Also, FP&L will provide an explanation for why these items cannot be completed by 5% power. Seismic supports for the sprinkler system will be backfitted by November 1983.
