Office of Nuclear Reactor Regulation  
Attention: Mr. Darrell G. Eisenhut, Director  
Division of Licensing  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Eisenhut:

Re: St. Lucie Unit 1  
Docket No. 50-335  
Radiological Effluent Technical Specifications

On November 5, 1982 (L-82-490), Florida Power and Light Company submitted revised Radiological Effluent Technical Specifications (RETS) for St. Lucie Unit 1. Because these RETS were to be as close as practicable to the St. Lucie Unit 2 RETS (which were undergoing NRC review and approval at that time), they were submitted in a marked up form as requested by your staff. However, due to confusion resulting from the marked up form, and due to additional changes to the Unit 2 RETS, another Unit 1 RETS submittal was required.

Attached is a revised St. Lucie Unit 1 RETS submittal. The RETS changes have been integrated into the current technical specifications to facilitate your review. All of the changes, indicated by change bars, are RETS changes and/or for consistency with Unit 2 technical specifications.

Please note that on page 6-11, items e. and f. of the current Unit 1 technical specifications have been deleted. This is consistent with Unit 2 technical specifications and provides resolution of the concerns identified in NRC Generic Letters 82-17 and 82-23.

Also please note that page 6-20a provides the High Radiation Area technical specifications which is essentially the same as what was requested by Letter L-77-388, dated December 21, 1977. In that NRC has not taken action on this, FPL is hereby withdrawing the December 21, 1977 request.

Mr. Darrell G. Eisenhut  
U. S. Nuclear Regulatory Commission

It is requested that the proposed technical specifications be approved for implementation by April 1, 1983, or by St. Lucie Unit 2 core load, whichever occurs first.

Very truly yours,

Robert E. Uhrig  
Vice President  
Advanced Systems & Technology
