The following table shows the results of the survey conducted in the month of May 1964. The data is presented in the form of a percentage distribution of responses for each category.

The results of the survey indicate that the majority of respondents (65%) are satisfied with the current situation. However, there is a significant portion (35%) who are dissatisfied, particularly regarding the economic situation and the government's policies.

The survey was conducted among a representative sample of the population in the urban areas of the country. The results are based on the responses of 1000 individuals.

Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Denton:

Re: St. Lucie Unit No. 2
Docket No. 50-389
Plant Readiness For Fuel Load; Request For Operating License

This is to advise you that St. Lucie Unit No. 2 has been designed, constructed, and tested in accordance with the Final Safety Analysis Report (FSAR) and other licensing commitments.

Florida Power & Light Company (FPL) possesses extensive experience in nuclear power plant operations and construction management. For St. Lucie Unit No. 2, FPL has used an integrated construction organization which employs an architect-engineer and a nuclear steam supply system vendor having extensive nuclear experience. Further, design and construction of St. Lucie Unit No. 2 have been carried out under the provisions of the FPL Quality Assurance Program which included detailed audits of the architect-engineer, integrated construction organization and nuclear steam supply system vendor. In addition, an engineering verification program has been completed to provide additional Quality Assurance in the engineering and construction practices used in St. Lucie Unit No. 2. Based on the foregoing, FPL is confident that St. Lucie Unit No. 2 has been designed and constructed in a manner providing assurance that the requirements of the Final Safety Analysis Report (FSAR) as amended, the Safety Evaluation Report (SER) as supplemented and Final Environmental Statement (FES) are being met.

In addition, the activities that have not been completed, but in FPL's judgment do not preclude the issuance of an operating license, will continue to be performed in accordance with procedures and programs designed to assure that FSAR, SER and FES requirements are met. All items that are not completed have been identified and are being tracked. FPL will review these items to ensure that they are completed prior to their required need.

Boo!

Harold R. Denton, Director
Office of Nuclear Reactor Regulation

FPL has concluded, based on extensive and on-going review as described above that the completion status of the plant will have no adverse impact to the safe operation of the plant or to the health and safety of the general public or plant personnel. FPL has also concluded that the unit will be ready to load fuel by approximately March 31, 1983, and therefore, we request that the operating license be granted for St. Lucie Unit No. 2.

Very truly yours,

Robert E. Uhrig
Vice President
Advanced Systems & Technology
