FLORIDA POWER & LIGHT COMPANY

March 30, 1983
L-83-197

Office of Nuclear Reactor Regulations
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Eisenhut:

Re: ST. LUCIE UNIT NO. 2
DOCKET NO. 50-389
OPERABILITY OF SAFETY-RELATED VALVES

In our FP&L letter, L-83-153 dated March 18, 1983, FP&L informed the NRC that a portion of the active safety-related valves previously committed to be stroke tested by core load will not be tested until Hot Ops II (post core load - prior to initial criticality).

FP&L believes that testing of these valves during Hot Ops II is justified because the affected safety-related systems are not required to perform safety functions prior to initial criticality.

In addition, FP&L believes that testing of these valves prior to initial criticality would not pose an undue risk to the health and safety of the public.

Very truly yours,

Robert E. Uhrig
Robert E. Uhrig
Vice President
Advanced Systems and Technology
