ATTENTION: Mr. Michael Layton, MS 4 B34

SUBJECT: NAC QA Program Update

REFERENCE: NAC International QA Program Approval for Radioactive Material Packages, Docket 71-0018, Revision 10

Dear Mr. Layton:

Consistent with the QA Program approval requirements of 10 CFR Part 71 regulations (specifically 10 CFR 71.106), NAC International (NAC) hereby formally advises that the NAC QA program document filed with the US NRC (last submitted in November 2004) has received no changes of any sort from that date.

Although NAC maintains implementation procedures and a Quality Assurance Manual that are routinely revised, we have maintained full awareness of the commitments we made to the NRC as a basis for our 10 CFR 71 QA program approval (our document QA20040145) and have made no QA manual or procedure changes that affect any commitment.

We trust that the foregoing is adequate to comply with the requirements of the noted Part 71 regulation. However, should you desire any additional information, please let us know and we will do our best to comply. I can be reached at 678-328-1276 or by email at hsmith@nacintl.com.

Sincerely,

R. Howard Smith
Vice President, Quality
NAC International
