Office of Nuclear Reactor Regulation
Attention: Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Eisenhut:

Re: St. Lucie Unit 2; Docket Nos. 50-389
Cycle 2 Reload, Stretch Power Operation

In December 1984, we desire to initiate the second cycle of operation of St. Lucie Unit 2 at a core power level of 2700 MWt (i.e. Stretch Power). We plan to submit the appropriate request to amend our Facility Operating License NPF-16 by April 1984.

This submittal will contain the proposed amendments to the Operating License and Technical Specifications to upgrade the rated core power from 2560 MWt to 2700 MWt. The submittal will contain the supporting safety analysis report generated based on the standard reload methodology of Combustion Engineering, Inc. The submittal will be in the same format and include virtually the identical transients as those presented for the St. Lucie Unit 1 Stretch Power submittal (L-80-381, November 4, 1980). Also the methodology to be employed for the Unit 2 analyses will be identical to that employed for the Unit 1 analyses.

We request that you schedule completion of your review for October, 1984, two months prior to the expected startup of Cycle 2, to allow for procedure modification, instrument setpoint changes and testing, and personnel training. We also request that preliminary assessments be completed by early August 1984 so that any necessary contingency or additional analyses can be accommodated to be submitted and approved prior to startup of Cycle 2.

We appreciate your efforts and assistance in this project. We realize that schedule requirements are demanding, and we will exert every effort to make our submittals as scheduled and to be available to respond to your requests as quickly as possible to aid in your review.

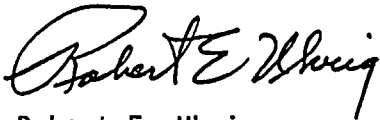

Boo!
