10 CFR 73.22

ATTN: Document Control Desk  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001**SUBJECT:**Davis-Besse Nuclear Power Station, Unit No. 1  
Docket No. 50-346, License Number NPF-3  
Use of Encryption Software for Electronic Transmission of Safeguards Information

Pursuant to the requirements of 10 CFR 73.22(f)(3) and the guidance provided in NRC Regulatory Issue Summary 2002-15, Revision 1, "NRC Approval of Commercial Data Encryption Systems for the Electronic Transmission of Safeguards Information," dated January 26, 2006, the FirstEnergy Nuclear Operating Company (FENOC) requests approval to process and transmit Safeguards Information (SGI) at the Davis-Besse Nuclear Power Station (DBNPS) using Symantec Endpoint Encryption version 11.1.2, or the latest validated version. This version of encryption product was developed with PGP Cryptographic Engine Software Version 4.3 and complies with Federal Information Processing Standard (FIPS) 140-2 as validated by the National Institute of Standards and Technology (NIST) Consolidated Certificate No. 0053 (Enclosure).

An information protection system for SGI that meets the requirements of 10 CFR 73.22 has been established and is being maintained. Written procedures are in place which describe: access controls; where and when encrypted communications can be made; how encryption keys, codes, and passwords will be protected from compromise; actions to be taken if the encryption keys, codes or passwords are, or are suspected to have been compromised; and how the identity and access authorization of the recipient will be verified.

FENOC intends to exchange SGI with the NRC, the Nuclear Energy Institute (NEI), and other SGI holders who have received NRC approval to use PGP software. Processing SGI on electronic systems is performed in accordance with the provisions of 10 CFR 73.22(g). The DBNPS will maintain a single (one) public key named with the following syntax:

LastName\_FirstName\_SiteName.asc.

Mr. Adam A. Webert, Supervisor - Nuclear Security Support, is responsible for the overall implementation of the SGI encryption program at the DBNPS.

# FIPS 140-2 Consolidated Validation Certificate

The National Institute of Standards and Technology of the United States of America

The Communications Security Establishment of the Government of Canada

## Consolidated Certificate No. 0053

The National Institute of Standards and Technology, as the United States FIPS 140-2 Cryptographic Module Validation Authority; and the Communications Security Establishment Canada, as the Canadian FIPS 140-2 Cryptographic Module Validation Authority; hereby validate the FIPS 140-2 testing results of the cryptographic modules listed below in accordance with the Derived Test Requirements for FIPS 140-2, Security Requirements for Cryptographic Modules. FIPS 140-2 specifies the security requirements that are to be satisfied by a cryptographic module utilized within a security system protecting Sensitive Information (United States) or Protected Information (Canada) within computer and telecommunications systems (including voice systems).

Products which use a cryptographic module identified below may be labeled as complying with the requirements of FIPS 140-2 so long as the product, throughout its life-cycle, continues to use the validated version of the cryptographic module as specified in this consolidated certificate. The validation report contains additional details concerning test results. No reliability test has been performed and no warranty of the products by both agencies is either expressed or implied.

FIPS 140-2 provides four increasing, qualitative levels of security: Level 1, Level 2, Level 3, and Level 4. These levels are intended to cover the wide range and potential applications and environments in which cryptographic modules may be employed. The security requirements cover eleven areas related to the secure design and implementation of a cryptographic module.

The scope of conformance achieved by the cryptographic modules as tested are identified and listed on the Cryptographic Module Validation Program website. The website listing is the official list of validated cryptographic modules. Each validation entry corresponds to a uniquely assigned certificate number. Associated with each certificate number is the module name(s), module versioning information, applicable caveats, module type, date of initial validation and applicable revisions, Overall Level, individual Levels if different than the Overall Level, FIPS-approved and other algorithms, vendor contact information, a vendor provided description and the accredited Cryptographic Module Testing laboratory which performed the testing.
