Office of Nuclear Reactor Regulation  
Attention: Mr. James R. Miller, Chief  
Operating Reactors Branch #3  
Division of Licensing  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Miller:

Re: St. Lucie Units 1 and 2  
Docket Nos. 50-335, 50-389  
Compliance with Generic Letter 82-16

We have reviewed your letter dated January 30, 1984 which provided the staff's review of FPL's conformance with the guidance of Generic Letter 82-16 (NUREG 0737 Technical Specifications).

We will submit a request to revise the St. Lucie 1 Technical Specifications to provide requirements for overtime limits and reporting of relief valve and safety valve failures and challenges as requested in your letter. These changes will use the St. Lucie Unit 2 format to increase the consistency of the two units. We expect to include these revisions as part of an amendment request which is now being prepared to address the recent changes to reportable event requirements as provided by Generic Letter 83-43. We expect these changes to be submitted by May 15, 1984.

As stated in the contractor's evaluation provided with your letter, FPL has not received an NRC review of our previously submitted positions on containment purge operation and surveillance requirements. We are not prepared to address technical specifications for this system until these items are resolved. Our positions were provided in our letter L-82-317, dated July 30, 1982.

Should you or your staff have any questions on this information, please contact us.

Very truly yours,

*J. W. Williams, Jr.*
