Docket Nos. 50-10

~~50-237~~
 50-249

Commonwealth Edison Company
 ATTN: Mr. Cordell Reed
 Assistant Vice President
 Post Office Box 767
 Chicago, Illinois 60690

Gentlemen:

We have completed our review of your May 30, 1978 response to our April 10, 1978 request for additional information relating to the status annunciator for the diesel generators at Dresden Station.

You have agreed to install alarms for Dresden Units 2, 2/3, and 3 diesel generators for the following conditions:

1. Manual air shutoff valve placed in the closed position; and
2. Bus tie breaker between the D/G and its emergency bus placed in Test position.

You have also agreed to either modify your procedure for diesel generator testing to preclude changing the D/C governor droop setting or to install an alarm for improper droop setting.

Based upon our review of your response, we have concluded that your diesel generator status annunciator system will be acceptable when the proposed modifications are completed, provided that the wording used in the alarm clearly indicates to the operator that the diesel start function is blocked.

Please provide a schedule for the completion of the proposed modifications within 60 days.

Sincerely,

Original Signed by:
 Dennis L. Ziemann
