9 Sept 75

To: U.S. Nuclear Regulatory Commission
Office of Inspection and Enforcement
Washington, D.C.

Gentlemen:

Please provide me with some details of the inoperable status of both diesel generators for 23 hours on 4 and 5 March 1975 at Dresden 3.

Also, what would be the most serious consequences of failure of the generators coupled to a loss of off-site power?

Are there any NRC restrictions on the operation of a reactor when all of the emergency generators are known to be inoperable or when a loss of off-site power is experienced?

Sincerely,
Pat Garrett
