1. The first section discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in all dealings, particularly in the context of public service or government operations.

2. The second section outlines the various methods and procedures used to collect and analyze data. It details the steps involved in identifying sources, gathering information, and processing it into a usable format. This section is crucial for ensuring the reliability and validity of the information used in decision-making.

3. The third section focuses on the application of the collected data to solve specific problems or address particular challenges. It provides examples of how the information is used to inform policy, improve efficiency, and address the needs of the community. This part highlights the practical implications of the research and analysis.

4. The fourth section discusses the challenges and limitations of the current methods and procedures. It identifies areas where the existing processes may be inefficient, outdated, or prone to error. This section is essential for identifying opportunities for improvement and innovation in data collection and analysis.

5. The fifth section concludes the document by summarizing the key findings and recommendations. It reiterates the importance of continuous improvement and the need for ongoing research and development in the field of data collection and analysis. The final thoughts emphasize the commitment to providing the highest quality of service and information to the community.

JUN 3 1988

L-86-231

Office of Nuclear Reactor Regulation
Attention: Mr. E. G. Tourigny, Project Manager
PWR Project Directorate #8
Division of PWR Licensing - B
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Tourigny:

Re: St. Lucie Units 1 and 2
Docket Nos. 50-335 and 50-389
Generic Letter 86-04

By letter dated February 13, 1986 (Generic Letter 86-04), the NRC Office of Nuclear Reactor Regulation requested certain information regarding the Florida Power & Light Company (FPL) program for providing engineering expertise on shift at the St. Lucie Plant.

The following information is provided in response to Generic Letter 86-04:

1. The current FPL program for providing engineering expertise on shift is consistent with Option 2 in the October 28, 1985 Federal Register Notice (50 FR 43621) containing the Commission Policy Statement on Engineering Expertise On Shift.
2. Our current STA program meets the criteria of NUREG-0737, Item I.A.1.1 as specified in Option 2 of the Policy Statement.
3. Although we are continuing to evaluate the combined SRO/STA concept, we have no plans to change our current STA program.

Very truly yours,

C. O. Woody
Group Vice President
Nuclear Energy
