Office of Nuclear Reactor Regulation
Attention: Mr. Ashok C. Thadani, Director
PWR Project Directorate #8
Division of PWR Licensing - B
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Thadani:

Re: St. Lucie Unit I
Docket No. 50-335
Steam Line Break Analysis

On November 8, 1985 (L-85-428) Florida Power & Light Company (FPL) submitted a confirmatory reanalysis of the steam line break event (Exxon Report XN-NF-85-85 (P)) in compliance with a requirement in Amendment 63 to the Unit I Operating License. By letter dated May 13, 1986, Reba M. Diggs of the NRC Office of Administration advised FPL that the reanalysis needed to be reviewed by the Office of Nuclear Reactor Regulation, which rendered it subject to the fee provisions of 10 CFR 170. In response to Ms. Diggs' request, FPL Check No. 1803 for the required application fee of \$150.00 is attached.

We have also attached a copy of the Exxon Nuclear Company affidavit supporting the withholding of XN-NF-85-85 (P) from public disclosure, as required by 10 CFR 2.790(b) for proprietary documents submitted to the NRC. This affidavit was not included with the FPL submittal in November 1985.

Should you have any questions regarding this material, please contact us.

Very truly yours,

C. O. Woody
Group Vice President
Nuclear Energy

A F F I D A V I T

STATE OF WASHINGTON)
) ss.
COUNTY OF BENTON)

I, H. E. Williamson being duly sworn, hereby say and depose:

1. I am Manager, Licensing and Safety Engineering, for Exxon Nuclear Company, Inc. ("ENC"), and as such I am authorized to execute this Affidavit.

2. I am familiar with ENC's detailed document control system and policies which govern the protection and control of information.

3. I am familiar with the document XN-NF-85-85(P) entitled "Steamline Break Analysis for St. Lucie Unit 1" referred to as "Document." Information contained in this Document has been classified by ENC as proprietary in accordance with the control system and policies established by ENC for the control and protection of information.

4. The document contains information of a proprietary and confidential nature and is of the type customarily held in confidence by ENC and not made available to the public. Based on my experience, I am aware that other companies regard information of the kind contained in the Document as proprietary and confidential.

5. The Document has been made available to the U.S. Nuclear Regulatory Commission in confidence, with the request that the information contained in the Document will not be disclosed or divulged.

6. The Document contains information which is vital to a competitive advantage of ENC and would be helpful to competitors of ENC when competing with ENC.

7. The information contained in the Document is considered to be proprietary by ENC because it reveals certain distinguishing aspects of the Exxon Nuclear steamline break analysis methodology which secure competitive advantage to ENC for fuel design optimization and marketability, and includes information utilized by ENC in its business which affords ENC an opportunity to obtain a competitive advantage over its competitors who do not or may not know or use the information contained in the Document.

8. The disclosure of the proprietary information contained in the Document to a competitor would permit the competitor to reduce its expenditure of money and manpower and to improve its competitive position by giving it extremely valuable insights into the Exxon Nuclear steamline break analysis methodology and would result in substantial harm to the competitive position of ENC.

9. The Document contains proprietary information which is held in confidence by ENC and is not available in public sources.

10. In accordance with ENC's policies governing the protection and control of information, proprietary information contained in the Document has been made available, on a limited basis, to others outside ENC only as required and under suitable agreement providing for non-disclosure and limited use of the information.

11. ENC policy requires that proprietary information be kept in a secured file or area and distributed on a need-to-know basis.

12. This Document provides information which reveals the Exxon Nuclear steamline break analysis methodology developed by ENC over the past several years. ENC has invested millions of dollars and many man-years of effort in developing the the Exxon Nuclear steamline break analysis methodology revealed in the Document. Assuming a competitor had available the same background data and incentives as ENC, the competitor might, at a minimum, develop the information for the same expenditure of manpower and money as ENC.

THAT the statements made hereinabove are, to the best of my knowledge, information, and belief, truthful and complete.

FURTHER AFFIANT SAYETH NOT.

A. E. Williamson

SWORN TO AND SUBSCRIBED
