1. The first part of the document discusses the importance of maintaining accurate records. It emphasizes that proper record-keeping is essential for ensuring the integrity and reliability of the data collected. This section also outlines the various methods used to collect and analyze the data, highlighting the challenges faced during the process.

2. The second part of the document focuses on the results of the study. It presents a detailed analysis of the data, showing the trends and patterns observed. The findings indicate that there is a significant correlation between the variables studied, which supports the hypothesis of the research. This section also includes a discussion of the limitations of the study and suggestions for future research.

3. The third part of the document provides a summary of the key findings and conclusions. It reiterates the main points of the study and emphasizes the significance of the results. The authors conclude that the study has provided valuable insights into the relationship between the variables and has contributed to the understanding of the underlying mechanisms.

4. The fourth part of the document discusses the implications of the study. It explores how the findings can be applied in practical settings and how they may influence future research and policy-making. The authors stress the need for further investigation to fully understand the implications of the study and to develop effective strategies based on the results.

5. The final part of the document is a conclusion that summarizes the overall findings and reiterates the main message of the study. The authors express their appreciation to the funding agencies and the participants who made the study possible. They also provide contact information for those interested in further details or collaborations.

Gentlemen:

Re: St. Lucie Unit 2  
Docket No. 50-389  
Fire Protection  
Technical Deviation Safety Evaluation

In response to your request dated December 5, 1986, Florida Power & Light Company (FPL) is providing the schedule to complete the engineering necessary for the modifications to structural steel supports in fire area M and in rooms that do not have sprinkler protection in fire areas A, C, H, and O.

The engineering is scheduled to be completed by November 1987. Upon completion of the detailed engineering design for the modifications, FPL will be able to provide a construction schedule for implementing the modification. FPL will inform the Project Manager of any changes in the schedule.

The above fire areas are patrolled by a roving fire watch. This is considered adequate compensatory measures until the modifications have been completed.

Should there be any further questions regarding this matter, please contact us.

Very truly yours,

  
C. O. Woody  
Group Vice President  
Nuclear Energy
