Washington, D. C. 20555

Gentlemen:

Re: St. Lucie Units 1 and 2  
Docket Nos. 50-335 and 50-389  
IE Bulletin 85-03

By letter L-86-204 dated May 15, 1986, Florida Power & Light Company (FPL) submitted design basis information and program plans/schedules for St. Lucie Units 1 and 2 as required by IE Bulletin 85-03, "Motor-Operated Valve Common Mode Failures During Plant Transients Due to Improper Switch Settings." The schedule for completion of the motor-operated valve testing was provided as November 14, 1987. This testing has been completed on St. Lucie Unit 1 and is in the process of being completed on St. Lucie Unit 2.

The purpose of this letter is to inform the NRC that this testing was not completed by the above date for St. Lucie Unit 2, and to provide the expected completion date. Three valves associated with the auxillary feedwater system remain to be tested. These valves will be tested when the conditions can be established during the startup from the current St. Lucie Unit 2 Cycle 3/4 refueling outage.

Should there be any questions concerning this subject, please contact us.

Very truly yours,

*C. O. Woody*
