Washington, D. C. 20555

Gentlemen:

Re: St. Lucie Unit I  
Docket No. 50-335  
Proposed License Amendment  
Pump and Valve Testing Program Technical Specifications

In accordance with 10 CFR 50.90, Florida Power & Light Company (FPL) submits herewith a request to amend Facility Operating License DPR-67.

As required by 10 CFR 50.55a(g), FPL updated the Inservice Inspection Program (ISI) for St. Lucie Unit I to the requirements of the 1974 Edition through Summer 1975 Addenda of Section XI of the ASME Boiler and Pressure Vessel Code. This is still applicable for the first 10 year Inspection Interval which ends February 11, 1988. As a result of this update, proposed Technical Specifications were submitted to NRC by FPL letters L-77-203, dated July 1, 1977, and L-77-291, dated September 16, 1977. Also, on September 8, 1978, FPL letter L-78-295 was submitted to incorporate revisions to the program based on meetings between FPL and NRC staff in May 1978. Interim NRC approval of the FPL program was granted on December 20, 1977.

Due to the length of time which has expired since the original ISI and Inservice Testing (IST) Technical Specification proposals, and based on conversations between FPL and the NRC, revised Technical Specification submittals are being developed by FPL for both the ISI and IST programs. The revised ISI Technical Specification amendment was submitted by FPL letter L-87-337, dated August 17, 1987.

The subject proposed amendment involves changes to various Technical Specifications with respect to the St. Lucie Unit I Pump and Valve Program. A marked up copy of the affected Technical Specification pages is included as Attachment 1. An Evaluation in support of the proposed amendment is included in Attachment 2. A "Determination of No Significant Hazards Consideration" is provided as Attachment 3.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author outlines the various methods used to collect and analyze the data. This includes both manual and automated techniques. The goal is to ensure that the data is as accurate and reliable as possible.

The third part of the document provides a detailed breakdown of the results. It shows that there is a significant correlation between the variables being studied. This finding is supported by statistical analysis and is consistent with previous research in the field.

Finally, the document concludes with a summary of the key findings and their implications. It suggests that the results have important implications for the industry and that further research is needed to explore these findings in more depth.

U. S. Nuclear Regulatory Commission  
L-87-469  
Page two

The proposed amendment has been reviewed by the St. Lucie Facility Review Group and the Florida Power & Light Company Nuclear Review Board.

In accordance with 10 CFR 50.91(b)(1), a copy of the proposed amendment is being forwarded to the state designee for the State of Florida.

In accordance with 10 CFR 170.21, FPL Check No. 6238 is attached as remittance for the license amendment application fee for St. Lucie Unit 1.

With the first 10 year Inspection Interval ending February 11, 1988, it is requested that NRC approve the subject proposed Technical Specification amendment by January 15, 1988.

Please contact us if you have any questions about this submittal.

Very truly yours,

C. O. Woody  
Group Vice President  
Nuclear Energy
