U. S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Re: St. Lucie Units 1 and 2  
Docket Nos. 50-335 and 50-389  
Generic Letter 88-03

By Generic Letter 88-03, Resolution of Generic Safety Issue 93, "Steam Binding of Auxiliary Feedwater Pumps", dated February 17, 1988, the NRC informed utilities of the Staff's resolution of Generic Safety Issue 93 and requested continued implementation of monitoring and corrective procedures previously identified in IE Bulletin 85-01, "Steam Binding of Auxiliary Feedwater Pumps". The Generic Letter additionally requested that addressees:

1. Maintain procedures to monitor fluid conditions within the auxiliary feedwater (AFW) system each shift during times when the system is required to be operable. This monitoring should ensure that fluid temperature at the AFW pump discharge is maintained at about ambient levels.
2. Maintain procedures for recognizing steam binding and for restoring the AFW system to operable status, should steam binding occur.

Addressees were also requested to provide a letter confirming the above.

This letter confirms that St. Lucie Units 1 and 2 have procedures in effect:

1. Which require the monitoring of AFW fluid conditions by checking the AFW pump casings cool to the touch each shift during times the system is required to be operable.

2. For recognizing steam binding and for the restoration of the AFW system to operable status, should steam binding occur.

Should additional discussion be required on this topic, please contact us.

Very truly yours,

W. F. Conway  
Senior Vice President - Nuclear
