Dear Alan:

Seventy-one loggerhead and eleven green turtles were removed from the St. Lucie Plant intake canal during the April-June quarter of 1988. Two loggerheads and two greens were dead when removed. No turtles were reported from other power plants.

Measurements for all animals are attached. Please note that beginning in May straight total tail length has been deleted and straight maximum carapace width has been added as a routine measurement.

All but one of the live turtles were released into the ocean off Hutchinson Island. The one exception, a juvenile green turtle captured on 7 June 1988, was released 2.5 miles southeast of the St. Lucie Inlet.

Please feel free to contact me if you have any questions concerning the enclosed data.

Sincerely,

R. Erik Martin
