FPL

September 3, 1991

L-91-235  
10 CFR 50.4

U.S. Nuclear Regulatory Commission  
Attn: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

RE: St. Lucie Unit 1  
Docket No. 50-335  
Generic Implications and Resolution  
of CEA Failure at Maine Yankee

By Florida Power and Light Company (FPL) letter L-90-323 dated September 10, 1990, FPL finalized its program and interim testing for the old-style CEAs resident in the St. Lucie Unit 1 Cycle 10 reactor core. On October 17, 1990 the NRC provided its concurrence with FPL program with the inclusion of all 20 old-style CEAs in the interim testing program.

The testing has been successfully performed five (5) times since October 28, 1990.

The next scheduled quarterly test would be required by September 29, 1991 based on the previous test of July 2, 1991. St. Lucie Unit 1 is scheduled to commence a refueling outage on October 18, 1991. The subject CEAs are scheduled to be replaced during this outage. FPL requests relief from the September 29, 1991 quarterly CEA test due to the proximity to the outage. Should the CEA test be required for any other reason set forth in our September 10, 1990 letter, the testing would be performed.

Please contact us if there are any questions about this submittal.

Very truly yours,

J.H. Goldberg  
President  
Nuclear Division
