SUMMARY OF OPERATING EXPERIENCE

50-335 DOCKET NO.:

St. Lucie #1

UNIT: DATE:

7/12/94

COMPLETED BY: Chris D. White

TELEPHONE:

(407) 468-4248

REPORT MONTH June, 1994

Unit 1 was operating at or above 80% power until June 6, 1994, when the reactor automatically tripped during inclement weather due to contact between metal facia and the 1A transformer causing it to short out. Unit 1 remained off-line until June 11, 1994. On June 11, power was increased and held at 30% power to perform Nuclear Delta T calculations. Once the Nuclear Delta T calculations were performed, the Unit continued to increase in power, but was held at 60% power to repair problems with the Turbine Cooling Water Pump. On June 12, 1994, Unit 1 increased to about 70% power, where it held for waterbox cleaning until June 14, 1994. Unit 1 again increased in power on June 15, 1994, and operated at or above 80% through the end of the month.

In accordance with the requirements of Technical Specification 6.9.1.6, there were no challenges to the PORVs or safety valves during the report period.
