#### SUMMARY OF OPERATING EXPERIENCE

DOCKET NO.: 50-335

UNIT: St. Lucie #1

DATE: 9/13/94
COMPLETED BY: C.D. White

TELEPHONE: (407) 468-4248

#### REPORT MONTH AUGUST, 1994

Unit 1 operated at or above 80% power from August 1, 1994 through August 8, 1994, when the Unit reduced power due to high back pressure. On August 10, following condenser cleaning, the Unit began to increase power until a leak was detected in the Digital Electro-Hydraulic (DEH) discharge piping. The DEH leak was small and was temporarily repaired. The Unit then returned to full power on August 11, 1994. On August 27, Unit 1 reduced power again for condenser cleaning. At this time, the previous DEH leak was observed to have worsened, and the Unit was taken off line for repair. On August 28, the DEH leak was repaired and the Unit began to increase power. Unit 1 operated at reduced power through the end of the month for condenser cleaning.

In accordance with the requirements of Technical Specification 6.9.1.6, there were no challenges to the PORVs or safety valves during the report period.
