RE: St. Lucie Unit 2
Docket No. 50-389
NRC Generic Letter (GL) 89-10 Completion

The purpose of this letter is to notify the NRC that Florida Power & Light Company (FPL) has completed the design bases verification of safety-related motor operated valves (MOVs) for St. Lucie Unit 2 during the Fall 1995 refueling outage (SL2-9). This verification includes the committed design and test activities to establish assurance of the existing capability of MOVs to perform their safety-related functions under design basis conditions.

FPL is available to meet with the NRC and discuss alternatives for closing the NRC GL 89-10 program. Documentation of program completion is available for on site review or for submittal to assist the NRC in closing this issue for St. Lucie Units 1 and 2.

By FPL letter L-95-37 dated February 2, 1995, FPL notified the NRC that the NRC GL 89-10 program for St. Lucie Unit 1 was completed during the Fall 1994 refueling outage (SL1-13).

Please contact us if there are any questions about this submittal.

Very truly yours,

W. H. Bohlke
Vice President
St. Lucie Plant
