RE: St. Lucie Unit 2  
Docket No. 50-389  
In-Service-Inspection Plan  
Second Ten-Year Interval  
Relief Request 14 - Correction

During a planning review of the St. Lucie Unit 2 In-Service-Inspection (ISI) Program, Florida Power & Light Company (FPL) identified an error in a supplement to ISI Relief Request 14. The purpose of this letter is to correct the information submitted to the NRC by FPL Letter, L-97-65 dated March 13, 1997. The NRC approved Unit 2 ISI Relief Request 14 on August 13, 1997.

Through the approval of Relief Request 14, FPL was granted relief from repeating the sequence of component examinations established during the first ISI interval to allow the use of an alternative to the requirements contained within Tables IWB-2412-1 and IWC-2412-1. In a supplement to the original relief request FPL committed to perform the reactor pressure vessel (RPV) examinations during the second period of the second interval. There are three Unit 2 refueling outages (SL2-10, SL2-11, and SL2-12) scheduled for the second period of the second interval. SL2-10 occurred in the Spring 1997, SL2-11 is scheduled for the Fall 1998, and SL2-12 is scheduled for the Spring 2000.

In the response to NRC request 1 provided in the Attachment to FPL L-97-65, FPL stated that the RPV examinations would be performed during the scheduled March 1999 refueling outage and that this schedule would have FPL performing the examinations 10 years after the March 1989 outage (the date of the last RPV examination.) There currently is no Unit 2 outage scheduled for the Spring of 1999. FPL plans to perform the RPV examinations during the first refueling outage after March of 1999. This refueling outage (SL2-12) is currently scheduled for the Spring of 2000. Please contact us if there are any questions about this submittal.

Very truly yours,

J. A. Stall
