 Nuclear Licensing Administrator
 Post Office Box 767
 Chicago, Illinois 60690

Gentlemen:

The documents which form the basis of the license limitations for Dresden Units 2 and 3 presently consist of a Preliminary Design Analysis Report, a two volume Safety Analysis Report (SAR), three volumes of amendments to the SAR, a number of special reports, applications for changes to technical specifications and periodic reports. As a result of the proliferation of documents describing and analyzing any one system, it is becoming increasingly difficult to locate descriptions and evaluation of the facilities as the documents presently exist. Continuation of the present system of documentation would unduly complicate licensing actions and the evaluation of plant safety. A system should be developed to organize the information presently on file pertaining to any one section of the SAR and to maintain an up-to-date SAR.

We therefore request that you submit, within 60 days, plans for organizing presently filed information and for organizing the format of future submittals. It is our understanding that you are in agreement with the need for improving the organization of documentation.

Sincerely,

Original Signed by
 D. J. Skovholt

Donald J. Skovholt
 Assistant Director for
 Operating Reactors
 Directorate of Licensing
