1.0 INTRODUCTION

The purpose of this document, Final Status Survey Final Report (FSSFR) Volume 6, Chapter 8, *Post-remediation Groundwater Monitoring 5th Quarter Results*, is to provide the radiological groundwater sampling results from the monitoring that was conducted for the Hematite Decommissioning Project (HDP) for the 5th Quarter post-remediation groundwater monitoring.

As described in the FSSFR Volume 6, Chapter 7, the analytical data from sampling for the four quarters post-remediation completion demonstrated that remediation activities did not impact groundwater and that the estimated dose from groundwater sources has shown the dose contribution from groundwater to be less than 4 mrem/year.

As discussed in FSSFR Volume 6, Chapter 1, the data provided in this chapter is intended to support the conclusion reached in FSSFR Volume 6, Chapter 7 that remediation activities at HDP did not impact groundwater (Jefferson City-Cotter Hydrostratigraphic Unit (HSU), and the Roubidoux HSUs).

2.0 BACKGROUND

FSSFR Volume 6, Chapter 1 provides the basis for post-remediation groundwater monitoring, the objectives of post-remediation groundwater monitoring, and the summary of data collected. Westinghouse indicated in FSSFR Volume 6, Chapter 1 that that “monitoring would be discontinued when it could be determined that the radioactivity concentrations did not pose an unacceptable potential for dose.” and “at the completion of the fourth quarter of post-remediation monitoring, an evaluation of the groundwater sample data will be performed to determine if the concentrations are stable, or are showing an increasing or decreasing trend as compared to historical data (2009 – 2015).”

FSSFR Volume 6, Chapter 1 also provided that “As there are no previous sample analysis results with indication of radionuclide contamination in the groundwater (Jefferson City-Cotter HSU, and the Roubidoux HSUs) exceeding MCLs or a dose limit of 4 mrem/year, the purpose of post-remediation sampling is to verify that remediation of the source area had not contributed radionuclide contamination to the groundwater.”

In Westinghouse letter HEM-17-48 to the U.S. Nuclear Regulatory Commission (NRC), dated August 9, 2017, Westinghouse communicated that it had completed the post-remediation groundwater monitoring period and the subsequent evaluation of the groundwater sample data. The evaluation concluded that there were no indications of Radionuclides of Concern (ROC) above the U.S. Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs) in any of the HSUs at the Westinghouse Hematite Facility during the post-remediation monitoring period.

As communicated to the NRC, although the post-remediation groundwater monitoring period concluded with the determination that there were no indications of any ROC above the EPA MCLs in any of the HSU, that until such time that Westinghouse submits the request to terminate NRC License SNM-33 that quarterly monitoring would continue. The supplemental data

provided in this chapter further validates that groundwater has not been impacted by remedial activities, and that the groundwater dose contribution determined in FSSFR Volume 6, Chapter 7 remains at 0.68 mrem/year or less.

3.0 POST-REMEDIATION GROUNDWATER MONITORING WELL NETWORK

The post-remediation monitoring well network is composed of 18 monitoring wells screened in the sand/gravel HSU, eight wells screened in the Jefferson City-Cotter HSU, and five wells screened in the Roubidoux HSU. New monitoring wells were installed prior to initiation of the post-remediation groundwater monitoring, with seven in the sand/gravel HSU and seven in the Jefferson City-Cotter HSU. Figure 1-1, *Post-remediation Groundwater Monitoring Well Network*, provides the locations of all monitoring wells that are monitored for radiological purposes post-remediation. Table 3-1 below lists the wells included in the sampling network. A Mann-Kendall analysis will be performed at the conclusion of each quarterly sampling, using a minimum of four data points, on each of the wells to evaluate trends in sample results. For existing wells, a 2 year (8 quarter) Mann-Kendall analysis will be performed at the conclusion of each quarterly sampling event as well.

The location and purpose of each monitoring well has been discussed in previous FSSFR Volume 6, Chapters 3, 4, 5, 6, and 7; and is not included here.

* Indicates if the well was an existing well or a new well installed for post-remediation monitoring.

4.0 POST-REMEDIATION GROUNDWATER MONITORING 5TH QUARTER SAMPLE RESULTS

4.1 Jefferson City-Cotter HSU Data Set

The post-remediation groundwater monitoring wells which monitor the Jefferson City-Cotter HSU were sampled for the 5th quarter between May 15 and May 31, 2017. The data set is provided in Attachment 1, *Post-Remediation Groundwater Monitoring 5th Quarter Results*. In Attachment 2, the data set for each constituent has been graphed for each well versus the respective MCL, along with the Mann-Kendell trend graph.

A review of the data set indicates that none of the groundwater monitoring well sampling results for any radiological constituent approached or was near the MCL.

The results of the Mann-Kendell trend analysis for the Jefferson City-Cotter HSU are provided in

the Table 4-1 below. The Tc-99 results in BR-04-JC and the Total Uranium results from BR-18-JC continue to indicate downward trends in concentrations. There was no change in the trend data from the 4th quarter trend data.

Table 4-1
Mann-Kendell Trend Analysis Results – Jefferson City-Cotter HSU

BR-16-JC	No Trend	No Trend
BR-17-JC	No Trend	No Trend
BR-18-JC	No Trend	Downward Trend
BR-19-JC	No Trend	No Trend

4.2 Roubidoux HSU Data Set

The post-remediation monitoring wells which monitor the Roubidoux HSU were sampled for the 5th quarter between May 15 and May 31, 2017. The data set is provided in Attachment 1, *Post-Remediation Groundwater Monitoring 5th Quarter Results*. In Attachment 2, the data set for each constituent has been graphed for each well versus the respective MCL along with the Mann-Kendell trend graph.

A review of the data set indicates that none of the monitoring well sampling results for any radiological constituent approached or was near the MCL.

The results of the Mann-Kendell trend analysis for the Jefferson City-Cotter HSU are provided in the Table 4-2 below. The Total Uranium result in monitoring well BR-10-RB continues to indicate a downward trend. There was no change in the trend data from the 4th quarter trend data.

*Data requirement is four quarters of monitoring results.

4.3 Sand/Gravel HSU Data Set

The post-remediation monitoring wells which monitor the Sand/Gravel HSU were sampled for the 5th quarter between May 15 and May 31, 2017. The data set is provided in Attachment 1, *Post-Remediation Groundwater Monitoring 5th Quarter Results*. In Attachment 2, the data set for each constituent has been graphed for each well versus the respective MCL along with the Mann-Kendell trend graph.

A review of the data set indicates that none of the groundwater monitoring well sampling results for any radiological constituent approached or was near the MCL.

The results of the Mann-Kendell trend analysis for the Jefferson City-Cotter HSU are provided in the Table 4-3 below. There was no change in the trend data from the 4th quarter trend data.

4.4 HSU Groundwater Elevation Contour Maps

The groundwater elevation contour maps for the Jefferson City-Cotter HSU, Roubidoux HSU and the Sand/Gravel HSU for the 5th quarter post-remediation monitoring period are provided in Attachment 3.

5.0 SUMMARY

There were no indications of ROCs above the MCLs in the Jefferson City-Cotter HSU and the Roubidoux HSU.

There was no indication of ROCs above the MCL in the Sand/Gravel HSU. As summarized in FSSFR Volume 6, Chapter 1, Revision 1, the Sand/Gravel HSU contains contamination in the form of leachate which is not usable groundwater. As the source term has been removed in the Sand/Gravel HSU during the remediation of the site it is not anticipated that there will be an overall upward trend and the conclusion of the post-remediation groundwater monitoring period. The sample data for the sampling that was conducted prior to and during the remediation of the site currently support the conclusion that remediation activities did not impact groundwater
